Core flows

Project Overview

A polished healthcare marketplace app designed to impress clients and support real startup workflows.

Problem

Patients need a simple way to discover trusted doctors, compare fees, choose clinic or online visits, and keep prescriptions and reports organized.

Solution

MedLink combines booking, doctor management, telemedicine UI, medical records, PDF prescriptions, payments, notifications, and admin approval tools in one Flutter app.

Core User Journey

Feature Matrix

Role-based modules built for patients, doctors, and admins.

Patient App

- Splash, onboarding, login, register, forgot password
- Role selection with patient / doctor / admin routing
- Home dashboard with quick actions and health tips
- Specialties, doctor search, filters, doctor details
- Favorites, reviews, ratings, and doctor profiles
- Appointment booking with date, slot, reports, symptoms
- My appointments, details, cancel and reschedule
- Medical records, prescriptions, payments, notifications

Doctor App

- Dashboard with today, pending, completed, earnings
- Pending requests with accept / reject actions
- Patient detail screen with reports and records
- Manage availability and slots
- Write prescriptions with medicine details
- Follow-up date, diagnosis, instructions
- Video consultation mock screen
- Doctor profile and logout flow

Admin Panel

- Admin dashboard with metrics and chart
- View patients, doctors, appointments, payments
- Approve, suspend, or reject doctors
- Revenue and payment overview
- Manage health tips for patients
- Doctor approval status persistence
- Logout confirmation flow
- Responsive dashboard-style UI

Technical Implementation

Clean Flutter architecture with Firebase-ready services and portfolio-grade UI polish.

Frontend

- Flutter
- Material 3
- Responsive Framework
- Google Fonts
- Iconsax

State & Routing

- Riverpod
- go_router
- Shared Preferences
- Hive-ready local storage

Backend Ready

- Firebase Auth
- Cloud Firestore
- Firebase Storage
- Firebase Messaging

Experience

- flutter_animate
- Shimmer loading
- Hero transitions
- Dark mode
- Empty states

Documents

- Prescription PDF
- Receipt PDF
- Share/download with printing package

Quality

- Analyzer clean
- Widget test passing
- Debug APK build passing

Portfolio Value

Why this project helps clients trust the developer behind it.

What a client sees

- A complete multi-role healthcare app, not just static screens.
- Modern mobile UI with animations, dark mode, responsive layout, and polished empty states.
- Real business workflows: booking, payments, prescriptions, records, admin approvals, and notifications.
- Firebase-ready architecture that can be connected to a production backend.

Verified quality

flutter analyze

No issues found

flutter test

All tests passed

flutter build apk --debug

Debug APK built successfully

Firebase rules

Firestore and Storage rules included

Available for custom Flutter apps

Use MedLink as a portfolio proof for appointment apps, booking platforms, telemedicine concepts, dashboards, Firebase MVPs, and polished mobile UI projects.
